

STOPAQ®

corrosion
prevention

WRAPPINGBAND

Non-aging Visco-elastic polymer technology

FEATURES

- Highest Specific Electrical Resistance
- Impermeable (salts, oxygen, bacteria, water) once applied
- Excellent adhesion to steel and other substrates like PP, PE, FBE
- Permanent Visco-Elastic (fluid like) behaviour
- Stable from -45°C up to +95°C

Self-healing corrosion prevention & sealant systems

STOPAQ®
SEALFORLIFE

Manufacturer:

STOPAQ B.V.
Stadskanaal
The Netherlands

STOPAQ SAUDI
Factory LCC
Dammam
Saudi Arabia

Conforms to any shape

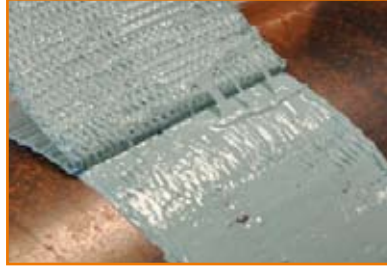

Wide range of applications

Worldwide accepted and approved

Surface preparation minimal St2

Excellent bonding properties to any substrate

Easy application at reducers

100% Self-healing, even after hot water immersion

Application at sub zero temperatures; -30 C

Application at high temperatures; +50 C

Mechanical protection with High Impact shield

Mechanical protection with Outerwrap

Mechanical protection with Outerglass Shield

Self-healing Wrap Coating for new constructed and rehabilitation of valuable infrastructural objects

BENEFITS

- Conforms to any shape
- 100% corrosion prevention, separated from 100% mechanical protection
- No adhesion failure possible to any substrate
- Can be applied at high and/or very low temperatures
- Fast and easy application
- Tested operational temperature range from -45°C up to 95°C (CZ max 50°C, CZH max 70°C, CZHT max 95°C). Cryogenic application possible
- Surface preparation by wire brush cleaning (St2) is sufficient
- Non toxic, environmental friendly (NSF approved)
- No cathodic disbondment possible; 100% self healing
- Will not crack, tear or breakdown, even after hot water immersion
- No MIC, Osmosis or undercreep due to full physical adhesion to the surface (Van de Waal's forces)
- Extensively tested
- Worldwide approved & qualified
