

COVALENCE® WPC100M

Product Information

Product description: Covalence® WPC100M system is a two-layer wrap-around heat-shrinkable sleeve field-joint coating system for pipeline operating at elevated temperatures.

Construction: Two-layer system

- **First layer:** Visco-elastic butyl based adhesive.
- **Second layer:** Radiation cross-linked, high density polyethylene with permanent Change Indicator (PCI).

The WPC100M is compatible with most commonly used steel pipe coatings and is used for offshore and onshore girth weld protection or to recoat (rehabilitate) long pipe sections and large radius bends. The installation is carried out directly on the cleaned and pre-heated pipe surface without any primer required. During installation, the heat-shrinkable sleeve is wrapped around and shrunk to form a tight fit around the joint. During recovery, the adhesive softens and flows to form a perfect bond with the pipe surface providing protection against corrosion. The radiation cross-linked outer layer forms a tough barrier against mechanical damage and moisture transmission.

Features:

- Low preheat sensitivity & proven functionality.
- No asphalt nor bitumen components in the adhesive.
- Covers a wide range of operating temperature ratings.
- Very good low temperature flexibility for installations in cold climates.
- No special equipment (standard gas torch & a roller).
- Dimpled backing provides a “permanent change” indicator for application of heat.

Benefits:

- Installation friendly in combination with high functional performance.
- No shelf life issues.
- Offers the optimum barrier protection against corrosion.
- Makes installation fast and easy. Keeps installation costs low.
- Dimpled backing allows easy post-heat inspection and offers a reliable inspectability at any time.

Ordering information

Covalence® WPC100M products are available

- As cut piece (pre-cut with separate closure patch)
- As Uni-sleeve (pre-cut with attached closure patch)
- As a roll (closure patches to be ordered separately)

Select sleeve width that will overlap onto the mill-applied coating by 50 mm (2 inches) minimum on each side of the weld joint. Take a 10% shrinkage during installation of sleeve into account when calculating minimum sleeve width.
